Two polygons fit together so that the exterior **angle** at each end of their shared side is 81 degrees. If both shapes now have to be regular could the **angle** still be 81.

ASSIGNMENT 4. BY. SHADRECK S CHITSONGA . THE MEDIANS OF A TRIANGLE . In this write up I will explore some of the interesting properties of the medians of a triangle . In any triangle, there are always three interior angles. These inside angles always add up to 180° . This rule is very helpful in finding missing angles in a triangle. 8-9-2012 · Choose a polygon, and reshape it by dragging the vertices to new locations. As the figure changes shape, the angle measures will automatically update.

Then, since every triangle has angles which add up to 180 degrees (Triangle Sum Conjecture) each of the (n-2) triangles will contribute 180 degrees towards . If you extend each side of a polygon to form one exterior angle at each vertex, you get a set of exterior angles. This conjecture tells us that the sum of a set of .
